Pigments and material used on the product listed above and used for the production of all King balls can be used for the manufacture of package, container, and implement used for or with food or of personal use, according to European Board directive of 06 April 2002 and following up date.

They can be considered not toxic.

Stafforini Dario

Pour DNA Airsoft

The FOTODEGRADABILE 13 increase the degradation of polymer caused by natural agents.

Its action is caused mostly by the sun exposition and less by the moisture of the ground, so the duration of degradation it is linked to the weather condition.

Degradation example:

Exposition in South Europe from 140 – 160 Kly/year in summer degradation starts after 90 days.

Without favourable condition to degrade it could take more time.
